

SUMMARY

Front End Software Engineer with full-stack experience building Angular applications, UI components, Spring Boot microservices, cloud-native systems, and enterprise-scale software platforms.

SKILLS

- **Programming Languages:** TypeScript, HTML, CSS, Java, Python, SQL, Bash
- **Front-End:** Angular, React, Next.js, Vue.js, TypeScript, RxJS, NgRx, Tailwind CSS, CesiumJS, Figma, JWTs
- **UI & Architecture:** Design systems, component libraries, Accessibility (ARIA/WCAG), state management, technical documentation
- **Back-End:** Spring Boot, Node.js, Quarkus, REST APIs, Microservices, Elasticsearch
- **Cloud & DevOps:** GCP, Azure/Atlassian Tools, Docker, Kubernetes, CI/CD, Git, AWS, Cloudbees, Keycloak
- **Testing & Automation:** Cypress, Jest, Jasmine, JUnit, Selenium, AI/Copilot
- **Databases & Messaging:** SQL, Redis, Kafka, ActiveMQ

WORK EXPERIENCE

Raytheon

Front End Software Engineer

Denver, CO

Oct 2025 - Present

- **Modernized front-end architecture** by leading migration efforts to **zoneless change detection** and Jest, improving test maintainability, front-end performance (rendering, bundle size, runtime), and long-term scalability.
- Owned the full lifecycle of **Cesium-based geospatial visualization features**, partnering with stakeholders to define requirements, build CZML generation tools and dynamic forms, and iterate on functionality through customer demonstrations and feedback.
- Developed complex data visualizations including orbital trajectory and constellation modeling tools, transforming mission data into intuitive, **interactive user experiences** for operational decision-making.
- Restructured and secured Express.js **reverse proxy** and **SSL/TLS** certification architecture to establish a staging environment on a custom domain, enforcing environment-driven HTTPS controls, authoring developer documentation, and aligning cross-functional teams around standardized, security-first dev workflows.
- Developed an **automated release pipeline** for Node-based UI packages, tarring, building, and validating bundled artifacts with pre-deployment tests and failure gating, **reducing release failures** and improving design system delivery reliability.
- Led development of **AI-powered chat interfaces** and **session management workflows**, designing reusable front-end architecture and integrating with backend APIs to support user-specific conversation history and future extensibility.
- Built reusable Angular components, **custom Material-based UI libraries**, and framework integration examples across Angular, React, and Vue to accelerate adoption and streamline developer onboarding.
- Mentored junior engineers, provided ongoing support for internal consumers, and promoted engineering best practices through documentation reviews, code reviews, and knowledge-sharing initiatives.
- Created developer-focused tutorials, example applications, and technical documentation that simplified complex data communication patterns and reduced onboarding friction for new platform users.
- Improved accessibility and usability standards by implementing **ARIA-compliant patterns**, authoring development guidelines, and establishing documentation used across multiple applications.

J.B. Hunt

Full Stack Software Engineer

Lowell, AR/Remote

Jan 2024 - Oct 2025

- Led development of multiple major application features using **Angular** and **Spring Boot**, delivering scalable solutions for a new enterprise platform.
- **Modernized** a legacy application supporting 200+ users, improving functionality, maintainability, and overall user experience.
- Deployed secure authentication and JWT role-based UI patterns, utilizing **Cloudbees** rollout feature flags. Managed vulnerability upgrades for **Keycloak** authorization patterns systems.
- Built and maintained reusable UI components for a centralized **design system library** used across multiple product teams and **micro-frontend** applications, improving development efficiency and UI consistency. Authored documentation and implementation guidance to drive adoption across product teams.
- Reduced end-to-end testing time by overhauling the **Cypress** automation suite and introducing **Cypress Dashboard** visibility across deployment pipelines.
- Implemented **Spring Boot** microservices and enhanced service health monitoring, accelerating a major application rollout by four months.
- Improved application performance and deployment efficiency through adoption of **Angular Signals** and native image optimization strategies.
- Ranked #1 in on-call support with an average assignment resolution time of 20 minutes while maintaining a 365-day timely fulfillment streak.
- Mentored a software engineering intern on frontend development, testing practices, and Agile workflows, contributing to a successful return offer.

J.B. Hunt

Software Engineering Intern

Lowell, AR/Remote

May 2023 - Jan 2024

- Developed new **Angular web** forms that enabled customers to request two additional shipment types online, expanding platform functionality and self-service capabilities.
- Resolved critical application defects and security vulnerabilities across web and mobile platforms, improving system stability and compliance.

Auburn University

Undergraduate Research Assistant

Auburn, AL

Jan 2022 - Jan 2023

- Developed Python scripts for **X-ray spectrum modeling**, applying angular momentum distributions to n-resolved cross-sections.
- Created a script in **Python** with the Lightcurve package to download and analyze TESS data of available stellar light curves to identify **new exoplanets**.

PROJECTS

Auburn University Staff Website Redesign

Next.js, Tailwind CSS, Vercel

- Redesigned and redeveloped Auburn University's staff website, delivering a responsive and accessible user experience across desktop and mobile platforms using **Next.js** and **Tailwind CSS**.
- Led early-stage UI prototyping and information architecture planning in **Figma** and **FigJam**.
- Improved site performance through server-side rendering, caching strategies, and automated **CI/CD deployment workflows** on **Vercel**.

George Eliot Archive Social Network Visualization

JavaScript, D3.js, Node.js

- Overhauled a research-focused data visualization platform using **D3.js**, enhancing UI/UX and implementing **real-time data updates** to improve accuracy and usability for researchers.
- Increased application responsiveness by **30%** through performance optimizations to data processing and visualization rendering workflows.

EDUCATION

M.S. Computer Science (In Progress, Expected 2028)	Georgia Institute of Technology
B.S. Computer Science	Auburn University
B.S. Physics	Auburn University
